The current state of work in the project:  
"Development and implementation of an effective model of improving practical professional skills of students of the Technical School Complex in Czartajew in cooperation with local entrepreneurs" financed from funds received from Iceland, Liechtenstein and Norway under the European Economic Area under the Education Programme.

Since June 2022, work has been underway on the development of Intellectual Work Results, i.e. the development of Internship Programs for all 8 professions conducted at Polish school and the creation of a Platform for more effective implementation of national internships. Together with the project partners and employers from the region of Siemiatycze county, educational and training materials are created, which will be the basis for the functioning of the Training and Evaluation Platform supporting the organization

of national internships of Polish students.

Together with partners from Greece and Poland, we worked on defining the minimum knowledge, skills and competences of future users of the platform, we developed scenarios for the implementation of an individual apprenticeship program, including for individual educational stages for each profession, and we also selected software for the technological layer of the Platform. Currently, work is underway on the implementation of training materials and on the intuitiveness of individual functionalities of information and training modules.

In October, representatives of Polish partners took part in a two-day training on settling and reporting projects from the 2nd call for proposals in Components III and IV, during which they had an opportunity to listen to experts of the Education Program Operator as well as beneficiaries of other projects, who introduced to the goals and activities of their projects. In March 2023 we plan to host our Polish partners to introduce them to the Norwegian VET system.

We will inform you about further developments in the project soon.
